Welcome to Stamp Album Generator 2

This is multi faceted stamp album page generator.

Stamp Album Generator 2 helps collectors automatically transform stamp data into album pages with practical layouts and collector-friendly control.

There is a history of development, that if interested, can be seen in an appendix at the end of the docment.

AlbumEasy Foundation

AlbumEasy is core to this project
Stamp Album Generation startup: Pick a country to open its review UI.
This program could not be completed without the incredible AlbumEasy by Bundu Technology Ltd. It is a foundational part of how this workflow is designed, and it deserves significant credit.
Learn more about AlbumEasy and download it here: Bundu Technology Ltd. AlbumEasy.
We have implemented about 70-80% of AlbumEasy commands. You can edit the final output and add any additional commands that are not auto-generated.
If you have not yet set up your Albums Root folder, you can do so now or let it auto-detect on launch. The Albums Root is where generated albums and related data are

stored, and you can change it later in the config editor.

If you have a Colnect inbox export and want to use it for review, you can import it now or later from the config editor. The default expected format is Colnect's "Export" option.
